

TAXLATOR BACKEND API DOCUMENTATION

This document contains all available backend API endpoints for the Taxlator project.

BASE URL

<https://group12-taxlator-api.onrender.com>

API DOCUMENTATION

https://group12-taxlator-api.onrender.com/docs/API_DOCUMENTATION.pdf

HEALTH CHECK

Used to confirm that the backend service is running.

Method	Endpoint	Description
GET	/health	Confirms the API is live

AUTHENTICATION ENDPOINTS

SIGNUP

Register a new user. A 6-digit verification code is sent to the user's email. User must verify their email before calculation records can be saved.

Method	Endpoint	Description
POST	/api/auth/signup	Create a new user

VERIFY EMAIL

Verify a user's email using the code sent at signup.

Method	Endpoint	Description
POST	/api/auth/verify-email	Verify email with code

SEND VERIFICATION CODE

Send a new verification code if the previous code expired or was lost.

Method	Endpoint	Description
POST	/api/auth/send-code	Send verification code

SIGN-IN

Authenticate an existing verified user and return a JWT. Only verified users can sign-in successfully.

Method	Endpoint	Description
POST	/api/auth/signin	Signin an existing user

CHANGE PASSWORD

Allows a logged-in user to change their password. Requires JWT authentication.

Method	Endpoint	Description
POST	/api/auth/change-password	Change password

FORGOT PASSWORD

Sends a password reset code to the user's email.

Method	Endpoint	Description
POST	/api/auth/forgot-password	forgot password

RESET PASSWORD

Resets a user's password using the reset code sent to email.

Method	Endpoint	Description
POST	/api/auth/reset-password	reset password

SIGN-OUT

Clear authentication cookie and logout.

Method	Endpoint	Description
GET/POST	/api/auth/signout	Signout user

CALCULATION ENDPOINTS 💰

Both Tax and VAT endpoints are dual-purpose:

- Public users can calculate without signing up (records will not be saved).
- Verified users can calculate and their results will be saved to their history.

TAX - PUBLIC

Method	Endpoint	Description	Note
POST	/api/tax/payepit/calculate	Calculator endpoint	if user is valid, record is saved

POST	/api/tax/cit/calculate	Calculator endpoint	if user is valid, record is saved
POST	/api/tax/freelancer/calculate	Calculator endpoint	if user is valid, record is saved

TAX - PRIVATE

Method	Endpoint	Description	Note
POST	/api/tax/payepit/calculate/save	Calculator endpoint	if user is valid, record is saved
POST	/api/tax/cit/calculate/save	Calculator endpoint	if user is valid, record is saved
POST	/api/tax/freelancer/calculate/save	Calculator endpoint	if user is valid, record is saved

VAT - PUBLIC

Method	Endpoint	Description	Note
POST	/api/vat/calculate	Calculator endpoint	if user is valid, record is saved

VAT - PRIVATE

Method	Endpoint	Description	Note
POST	/api/vat/calculate/save	Calculator endpoint	if user is valid, record is saved

STATUS CODES

- 200 – Successs
- 201 – Successs / new resourse created
- 400 – Bad request / validation error
- 401 – Unauthorized / invalid token
- 403 – Forbidden / email not verified
- 404 – Resource not found
- 500 – Server error
